25' PART #29.5211
50' PART #29.5212

75' PART #29.5213
100' PART #29.5214

ABOUT

MTM Hydro's KobraJet Non Marking Grey KobraJet Hose is available in various lengths to accommodate all cleaning scenarios. This true non-marking hose now features a thicker inner wall to prevent gashes and ruptures and is great for any pressure washing application. KobraJet is manufactured out of high quality components and assembled in the U.S using 'Bite the Wire' technology when installing the 3/8" rigid and swivel fittings. This technique guarantees that your hose ends will stay in place and will not rupture or blow off during pressure spikes. These advanced fittings also have a longer life with superior resistance to corrosion due to the salt spray test which yielded results of 125 hours before corrosion was detected; nearly twice the industry standard, meaning your hose will last longer, especially in abusive environments.

FEATURES:

KobraJet hose can handle temp spikes up to 310°F but constant run temperatures should not exceed 275°F

- 3/8" Male NPT Rigid End X 3/8" Male NPT Swivel End

Upgraded Hoses are available in stock sizes but if you are looking for a non-stock upgraded hose, add a hose upgrade part# to this order. Simply add 24.0186 (Brass Coupler and Plated Plug) or 24.0189 (Stainless Coupler and Plug) in the same quantity as your hose and we will install them using Medium Loctite with the correct torque to prevent leaks and make your system all QC!
